How to import sales from your POS System

- 1. Select the date of this sales mix, or if you are entering for a group of days, enter the date of the last day of this group. If processing automatically from your POS system then the date will automatically be processed.
- 2. Click on the Import POS File button. A window will be opened prompting you to select a file. Select the file you wish to import. Click **Open**.
- 3. Do Selling Prices Match? Average selling prices are indicated in the left hand POS column "price". Any prices that are not the same in Optimum Control and your POS will be marked in red. All those that are the same will be marked in green. This is a valuable tool because if you have determined a certain profitability based on a selling price and you are not getting that with the POS system then you will be making less money.
- 4. Once imported, Optimum Control provides a preview screen so you can verify the information being imported from your POS and make any necessary corrections. NOTE: If numbers appear instead of product names then you have not set up all of the menu products to correspond to the file you're importing.
- Click Save. The imported data will now analyzed to determine if any changes or mismatched to recipes have occurred and if any new recipes need to be added to Optimum control. Once all recipes and mismatches are dealt with click Save to complete the final save. Any products you did not complete at this time will be saved as pending sales.

| Import from: C:\TracRite\POS\ | | | | | | Browse | Save POS dir | | | |
